TECHNOLOGY & TOOLS

- Java / J2EE
- Spring Boot Microservices
- Spring MVC
- RESTful APIs
- Agile Methodology
- Apache Kafka
- AWS
- JUnit
- Mockito
- Maven
- Gradle
- Hibernate
- SQL, mySQL
- Dynatrace
- Kibana
- Bitbucket / Github
- Jira
- Confluence
- CI / CD
- Basic HTML, CSS

CERTIFICATION

- AWS Cloud Practitioner

SUMMARY

As an engineering professional with over 12 years of dedicated experience, I have delivered high-quality applications for Banking Domain.

- My track record includes spearheading the implementation of numerous projects from inception to fruition showcasing my proficiency in navigating complex technical landscapes, mentoring junior developers and delivering results within defined timelines.
- I excel in code implementation using Java and different extensions of Spring Framework, rigorous unit testing using JUnit and Mockito, adept problem-solving and consistently striving to provide optimal solutions.
- Proficient in Agile methodology, I possess a comprehensive understanding of its principles and have successfully applied them throughout various projects.
- I am always ready to adapt and learn new tools and technologies.
- I am currently on Skilled Worker Visa and will need 3 years sponsorship before I am eligible to apply for ILR.

WORK EXPERIENCE

TSB Bank Plc

2022 - PRESENT

Senior Microservices Engineer

Most of the development work is delegated to offshore team. Owing to this, I implement code as well as lead a team of more than 100 developers who are based offshore. As a Senior Microservices Engineer:

- I have lead and delivered more than 10 Resilience and Performance improvement changes that has resulted in significant cost savings to the bank.
- On a regular basis, I interact with Product Owners, Architects, Scrum Masters and Release Management during feature implementation and delivery.
- I perform regular code reviews and define coding standards to be followed.
- I have identified multiple opportunities for process improvements within the engineering team and have been instrumental in delivering them.
- I am also involved in providing Production Incident support for issues related to Digital Microservice by referencing the code implemented, investigating the logger statements and using tools like Dynatrace, Kibana.

Accenture Solutions Pvt. Ltd. India

2015 - 2022

Application Development Associate Manager

I was part of Barclays Mobile Banking (BMB) Gateway team. I started as a Software Engineer and rose to the level of Technical Lead for entire Transactions Stream of BMB Gateway. We followed Agile Methodology for delivering all changes.

As part of BMB Gateway team:

- I have delivered multiple priority and regulatory features including Loans, Overdrafts (CMA and HCC), Adobe Banners, Mobile Cheque Deposit, Security Filters, Customer Transactions and many others.
- As a Technical Lead, I provided mentorship and guidance to junior colleagues to facilitate their professional development.
- I have delivered multiple enhancements in performance, reliability and scalability of application by leveraging my expertise and experience.
- I represented development teams progress, challenges and proposed their solutions and relevant dependencies / blockers in our regular scrum calls.
- I have Implemented code, conducted Unit testing utilizing JUnit framework and other automation testing methodologies defined by the Bank, performed defect analysis and implementing relevant code fixes.

EDUCATION

2008-2012

PUNE UNIVERSITY, INDIA

- Bachelor of Computer Engineering

LANGUAGES

- English (Fluent)
- Marathi (Fluent)
- Hindi (Fluent)

WORK EXPERIENCE

Pyramid IT Consulting

2013 - 2015

Associate Software Engineer

I was a contractor from Pyramid IT Consulting working for Accenture Solutions Pvt. Ltd. Along with working as part of Barclays Mobile Banking (BMB) Gateway team, I was also involved in delivering 2 internal mobile applications for Accenture during this tenure. I was the only backend developer for both these mobile applications.

As an Associate Software Engineer:

- I delivered changes for both Barclays Mobile Banking and the Internal Applications of Accenture without impacting the delivery timelines of either applications. This helped me significantly improve my time management and prioritization skills.
- For the Internal Applications, I created the Spring Boot based microservices from scratch which helped me learn the very basics of microservice setup.
- Being the sole backend developer for Internal Applications, I took complete ownership of it including building the application, writing test cases, performing defect analysis and fix as well as deploying it.
- For BMB we followed Agile Methodology while for the internal applications we followed Waterfall model. This helped me understand both delivery models.

Barclays Technology Centre India

2012 - 2013

Graduate Developer

I was part of a small team of Interns whose responsibility was to build and deliver an internal web application for Barclays from scratch. We delivered the application within defined timelines. As a Developer, my roles and responsibilities were:

- Requirement gathering and analysis by interacting with Product Owner.
- Implementing the base framework for our web application using Spring MVC.
- Implementing Vanilla web pages using HTML , CSS which will call our Microservices. Beautification of our vanilla web pages was done by experienced UI/UX developers.
- Implementing Unit test cases.
- Defect investigation and fix implementation.
